

3 annoying things about programming

Bugs :

in one weekend workshop, you only managed to install Emacs on your computer.

How to deal with the frustration:

- . Accept it.
- . Cry.
- . Give yourself a deadline.
- . Switch to a easier task.
- . Explain the problem out loud to someone else.

Too many frameworks and languages:

You are just starting with Clojure,
but there is Haskell, Erlang, Rust,
Scala, Hope, Joy, Mercury, QML,
Python... and do not forget
Javascript and its 1000 frameworks.

How to deal with the load:

- Study the basics of 10 things or pick something and go for it. Both are fine!
- Sign up for newsletters.

Hacker culture:

You have free pass on being rude
because you are a 10x programmer ||
programming is something you are, not
something you do

How to be nice:

- . Managers/Team leaders should pay attention to toxic behavior.
- . Go to places where you feel safe.
- . Be nice to everyone.

Do not give up!
